

Traffic/ network connectivity

Which network connection has my server?

To find out, which physical network connection has your dedicated server, please use the following command:

```
ethtool eth0 | grep -i speed
```

The following results are possible:

- Speed: 100Mb/s for 100Mbit connection
- Speed: 1000Mb/s for 1Gbit connection
- Speed: 10000Mb/s for 10Gbit connection

Connections with 10Mbit are rarely available in old server plans.
