

# Confixx

## How do I make special settings in Confixx (openbase\_dir / safe\_mode) ?

To make special settings proceed as follows:

1. Log in as admin.
2. "Einstellungen"
3. "http Spezial"
4. "für einen Kunden ändern"
5. enter: *php\_admin\_value open\_basedir none*

Maybe it's necessary to switch off the SafeMode.

To this the same procedure as above is required, though another entry has to be made:

*php\_admin\_flag safe\_mode Off*
