DNS

Own IN-A records?

Using an **A Resource Record** a DNS name is assigned an <u>IP address</u>. A-RRs are the most common <u>Resource Records</u> at <u>DNS</u>

Please bear in mind:

As hostname you can specify the corresponding subdomain (e.g. "www") or the following 2 wildcards:

- * stands for all subdomains of the domain (www.domain.de / subdomain.domain.de)
- @ stands for the actual domain (wildcard entry) (domain.de)

Please note that the TTL has to amount to at least 60. Lesser values aren't accepted by the system.
