

IP-Adressen

How can I specify an additional IP manually ?

At this point it has to be distinguished between the different Linux distributions.

Gentoo:

The file can be found in `etc/conf.d/net`

Information can be found in the `/etc/conf.d/net.example`

SuSE / openSUSE

The network configuration file can be found in
`/etc/sysconfig/network/ifcfg-eth0`

Here the file has to be modified as follows for each additional IP :

```
IPADDR_AAA=xxx.xxx.xxx.xxx  
NETMASK_AAA=yyy.yyy.yyy.yyy  
BROADCAST_AAA=zzz.zzz.zzz.zzz
```

Whereas xxx/yyy/zzz stands for the following values:

xxx.xxx.xxx.xxx => IP address

yyy.yyy.yyy.yyy => net mask

zzz.zzz.zzz.zzz => broadcast address

Unique solution ID: #1351
