Routing

How many HOPs are occuring on the way to my server ?

Generally there are less than 10 Hops to the server in the colocation center. This may however vary heavily depending on the selected access provider.

Under certain circumstances (e.g. busy data connections) some large access providers route their data traffic through less busy data connections abroad or even transatlantic.

Since we have no influence on the routing of access providers please contact the corresponding access provider.
